## Ouse River Environmental Values Determination

Hydro Tasmania is undertaking a study of the Ouse River to establish the environmental values that need to be considered in relation to the Ouse River Project. This project aims to develop water infrastructure that will assist with the resolution of a range of issues within this catchment relating to water availability and environmental health. Interested parties are invited to complete a questionnaire and participate in a workshop to be held later in the year. Information gathered will be used by Hydro Tasmania to assist in identifying the environmental values associated with the Ouse River and develop mitigation measures necessary for the project to proceed. If you are interested in being involved please contact Caroline Whalley at [caroline.whalley@hydro.com.au](mailto:caroline.whalley@hydro.com.au) to obtain the questionnaire by 31 July 2010.

***If you have any queries regarding the process or the project please contact Andrew Jones on 6230 5665.***
