

Tarraleah redevelopment

Bringing benefits to Tasmania

The Tarraleah hydropower scheme in Tasmania's Central Highlands has been generating clean energy for more than 85 years. As the scheme reaches the end of its operational life, we're reimagining how it can continue to play a strong role in Tasmania's energy future.

We're proposing to fully redevelop the scheme. This will boost energy generation

and flexibility, and deliver real benefits for locals through jobs, training, local procurement, and community initiatives.

We're planning to develop a local benefits sharing strategy and action plan with local communities and stakeholders. This will set out how we'll deliver long-term economic and social value.

Job creation

We expect the project to create around 250 jobs during construction! These roles will span a wide range of engineering, construction and trade skills. The project will also open up opportunities for local suppliers, manufacturers and service providers.

Opportunities for local business

We're committed to strong local content. The successful head contractor will need to meet our requirements for using local businesses and supporting local and regional participation.

Upskilled local workforce

When we move into the construction contract stage, we'll set clear targets for skills development and training. We'll work closely with industry, education providers and employment services to help grow a skilled local workforce.

Community benefits fund

We'll invest in initiatives the community wants to see - projects that create lasting value and help strengthen the region for the long term.

Engaging local suppliers

Procurement for the Tarraleah Redevelopment Project has started!

The first stage is inviting proposals from construction contractors with the capability to deliver major infrastructure projects, as well as from specialist hydropower equipment suppliers.

Local businesses interested in working on the project are encouraged to create a company profile on the *ICN Tasmania Gateway*. A clear and accurate profile ensures your business is visible and ready for upcoming opportunities.

By registering, you can submit Expressions of Interest and set up notifications for the industries and capabilities you want to receive work package alerts for.
